

EQUILIBRIO

RULES

1. Find a flat place to play!

2. Select a picture puzzle from the book.

3. Pick out the necessary pieces (shown at bottom of puzzle page).

4. Build the structure standing up (vertically).

5. Celebrate!

THINK ABOUT WHILE YOU'RE PLAYING

First, spend some time **exploring** the game!

Then, consider some of the following questions:

*How do you pick a picture from the book to make?

*What's one good idea you shared with your partner?

*Can you tell me how you matched a block with the picture?

*What makes a structure tricky to build?

*Take one block, what are different ways you can look at the block?

*How can you tell the difference between a cylinder and rectangular prism in the pictures?

EXTRA CHALLENGE

1. Can you create and draw your own puzzle, including at least one challenging perspective of a block?

2. Is this game similar to any other games you've played? How are they similar?
